

Custom Applications

Rabu, 3 Juni 2015 | 20:32:23 WIB | **Endang Kurniawan**

We excel at building Custom Web Applications to solve complex business problems. 3 year of experience in web based application development for several multinational companies has given us a unique perspective towards quality and scalability Web based applications are both simple to develop and easy to deploy. So long as internet connectivity is available, you could access the system from any part of the world. Salesmen, on site engineers, mobile employees, employees working from home can now be as productive as in-office staff. This brings our development costs down and speeds up turnaround times. Our custom web solutions are built to offer excellent usability, scalability and universal compatibility in terms of browsers and platforms. Each module is built to plug into a framework that manages foolproof security and auditing making the web solutions as secure as desktop solutions if not more.

Often our solutions interface with book keeping software\'s like Quick books, Sage and Microsoft Great Plains to leverage the power of professional accounting software at the same time offering the versatility of a web based interface.

Our complete services consist:

1. Initial assessment
2. Design
3. Project planning and management
4. Development
5. Integration with existing applications
6. Managed hosting

After we realize the project\'s targets and needs, and have a thorough interpretation of your business requirements, we will serve you with a design for your software and a plan for developing it. It is important to establish a web application development strategy for each particular project to assure time frame delivery and to increase the quality of the absolute product.

Our engineers enjoy challenges. Each corporation is unique with very different needs, analyzing the business needs and proposing innovation solutions that delight our clients is the best part of our jobs.

All is about imagination - Endang Kurniawan
