

Web Development

Jum`at, 5 Juni 2015 | 11:28:47 WIB | **Endang Kurniawan**

With Internet becoming the most common and easy accessible service these days, web business has started to take its shape. Moving from the traditional ways of introducing your business, websites have become the most innovative styles of talking and introducing about your business. Website is one application medium that can facilitate the various processes and promotions of your business. With the help of web application development, many unimagined processes and non-viable works are now accomplished immediately. Developing web applications have therefore become an important medium for out B2B or B2C interactions in the business today.

In an era, where you get almost everything readymade, leaves you with a very common presence. That\'s where we introduce the essence of making custom made websites or to even call it tailored websites. The websites designed and developed in a customized way make or rather help you portrait your business to your audience in the very own way you want. Every website development follows a pattern or what we better know it as the production cycle. It mainly entails 4 steps which can be details as the following:

1. Establishing a scope or purpose
2. Planning and identifying the process
3. Development stage of the application
4. Beta testing and launch of the application.

Though the process remains the same everywhere, we at Datalindo make our approach toward the development of the application very precise and perfectly engineered. We do not believe in the size of the project. What we believe in is giving the right solution perfectly suiting your needs. This is what make us stand different and preferred from the others.

All is about imagination - Endang Kurniawan
